

a2
9. (Amended) The radiation source according to claim 8, wherein a color of a portion of said radioactive deposit corresponds to the activity level of said portion of said radioactive deposit.

a3
13. (Amended) The radiation source according to claim 1, said outer housing configured to be opened by removal of said fastener.

a4
17. (Amended) A radiation source for calibration of nuclear imaging equipment, said radiation source comprising:

an outer housing having a fastener, said outer housing configured to be opened;

a flexible substrate removably contained within said outer housing, said substrate having a front surface; and

a radioactive deposit fixedly deposited upon said front surface, said radioactive deposit having a radioisotope, a binding agent, and a colorant, wherein

at least a portion of said radioactive deposit has at least two layers and

a color of a second portion of said radioactive deposit indicates an activity level of said second portion of said radioactive deposit.

18. (Amended) A radiation flood source for calibration of nuclear imaging equipment, said radiation source comprising:

an outer housing having a fastener, said outer housing configured to be opened;

a flexible substrate removably contained within said outer housing, said substrate having a front surface;

a radioactive deposit fixedly deposited upon said front surface, said radioactive

deposit having a radioisotope, and a colorant; and

a4
Concl'd
a sealing layer covering said radioactive deposit and said front surface of said substrate, wherein

at least a portion of said radioactive deposit has at least two layers and

a color of a second portion of a radioactive deposit indicates an activity level of said second portion of said radioactive deposit.

34. (New) A nuclear imaging system, comprising:

a5
a piece of nuclear imaging equipment to be calibrated; and

a radiation flood source to calibrate the piece of nuclear imaging equipment including,

an outer housing having a fastener, said outer housing configured to be opened,

a substrate removably contained within said outer housing, said substrate having a front surface; and

a radioactive deposit fixedly deposited upon said front surface, said radioactive deposit having a radioisotope.

35. (New) The nuclear imaging system of claim 34, further including a second substrate with a second radioactive deposit deposited thereon, said second substrate being contained within said outer housing.

36. (New) The nuclear imaging system of claim 34, wherein the combination of said radioactive deposit and said second radioactive deposit produces a desired
